1. Introduction

1.1 Under the Zetland County Council Act 1974 (the Act of 1974), as amended, the Shetland Islands Council has a duty to promote the conservancy of, and control of development in, the coastal area of Shetland, with the exception of those areas under the jurisdiction of Lerwick Port Authority or Broonies Taing Pier Trust.

1.2 The purpose of the works licence policy is to provide guidance to all involved in the process of considering proposals that fall within the scope of the Act of 1974. In general terms that means the placing of ‘works’ as defined by the Act of 1974 in the sea, on the seabed or on the foreshore below Mean High Water Springs (MHWS) and out to 12 nm. Works means developments of all types other than that for the purposes of marine fish farming. The Act of 1974 also empowers the Council to grant dredging licenses within the limits of territorial waters around Shetland.

1.3 The Council will apply this policy to all applications for works licences for which the Council has authority to issue works licences in terms of the Zetland County Council Act 1974 determined on, or after, the date it is approved by Shetland Islands Council. Applications that are out with policy, or attract objections will be determined in line with the Council’s Scheme of Delegation as it applies to the Planning Service.

1.4 This policy has been drawn up in recognition of the Council’s commitment to sustainable development of which the key aims in relation to development in the coastal area are to:

- Encourage appropriate development that maintains and improves life chances for local people.
- Involve local communities in the decision making process.
- Protect and enhance Shetland’s environment.

At all times the Council will endeavour to balance these aims to ensure its policies and decisions are equally promoted.

1.5 The Council has certain powers and duties in respect of environmental protection, as do other statutory bodies and agencies (see section 3, Regulatory Framework). In respect of works in the coastal area, there may be circumstances where it would be more appropriate for another body to exercise its powers to achieve a particular objective rather than for the Council to seek to secure that objective through the imposition of conditions attached to works licences. However, this does not prohibit the Council from attaching conditions to works licences that may have the effect of securing other objectives as well.

1.6 Shetland Islands Council is involved in a number of areas in the fast evolving sphere of marine spatial planning. Principle among these is the Shetland Islands’ Marine
Spatial Plan, the Local Development Plan and future Regional Marine Plans required under the Marine (Scotland) Act 2010. The purpose behind these plans is a need to optimise, in a balanced manner, the variety of activities that occur in Shetland’s marine coastal environment to both safeguard its assets and allow appropriate sustainable development. As such this Works Licence policy will be an integral component of these Plans. It is strongly recommended that developers consult these Plans prior to submitting a works licence application.

1.7 This document comprises background information or general advice to developers and prospective licensees and informs the statements contained within the Works Licence Policy.

2. Background

2.1 The Act of 1974 was passed primarily to regulate the activities of the oil industry in the coastal area of Shetland. However, this policy is also primarily concerned with, but is not confined to, the following developments and activities:

- Piers, Breakwaters, Marinas, Sea Defences and other constructions
- Moorings, Pontoons and Moored Barges
- Pipelines and cables
- Marine renewable energy developments (wave, tidal and wind).
- Septic tank sea outfalls
- Seaweed farming
- Dredging

3. Regulatory Framework

All Developments

3.1 Works licence applications are required for works in the coastal area (MHWS to the limit of territorial sea) around Shetland. Applications will be considered in terms of this policy; the Council's Local Development Plan (where relevant); the National Marine Plan; Scottish Planning Policy; Sectoral Plan Options for Offshore Wind and Marine Renewable Energy and Shetland Islands’ Marine Spatial Plan. In addition, applications will be considered in terms of the existing legislative framework currently applying to the development envisaged.

3.2 Development for which a works licence is required may also require other permissions from the Council, most notably planning permission (for development above MLWS) or consent from the Council as Coast Protection Authority (for coast protection works). In respect of such developments, existing land-use planning policies (as set out in the Scottish Planning Policy, the Council's Local Development Plan and the Council’s Coast Protection Policy) provide the primary policy guidance.

3.3 Works below Mean Low Water Springs (MLWS) will generally require a seabed lease from the Crown Estate under the Crown Estate Act 1961. The Council recommends
that developers contact the Crown Estate at the earliest possible stage to ensure that their interest is registered and conflicts with other development(s) can be avoided.

3.4 Works may require consent from the Scottish Environment Protection Agency (SEPA) under the Water Environment (Controlled Activities) (Scotland) Regulations 2011 in respect of any discharges and/or abstractions from the works.

3.5 A marine licence from Marine Scotland under Part 4 of the Marine (Scotland) Act 2010 may also be required in respect of placement of works in the sea, dredging and navigation matters. It replaces the consents previously granted under the Food and Environment Protection Act 1985 and section 34 of the Coast Protection Act 1949.

3.6 The Council additionally has a statutory duty to meet the requirements of the following legislation:

- The Habitats Directive – conservation of habitats and species; designation of Special Areas of Conservation
- The Birds Directive – conservation of wild birds; designation of Special Protection Areas
- The Water Framework Directive – ensures that all inland and coastal waters within river basin districts achieve good ecological status by 2027
- Wildlife and Countryside Act 1981 – protection of birds, animals and plants; invasive non-native species; designation of Sites of Special Scientific Interest; nature reserves; rights of way
- Water Environment and Water Services (Scotland) Act 2003 – protection of the water environment including river basin management planning, controlled activities regulations, provision of water and sewerage services
- Nature Conservation (Scotland) Act 2004 – duty to further the conservation of biodiversity; SSSIs; preparation of the Scottish Marine Wildlife Watching Code
- Marine (Scotland) Act 2010 – Marine Protected Areas; marine planning – National and Regional Marine Plans; conservation of seals including haul out designation
- Wildlife and Natural Environment (Scotland) Act 2011 – provides additional powers and amendments to the 1981 Wildlife Act
- Water Environment (Shellfish Water Protected Areas: Designation) (Scotland) Order 2013 – identifies specific coastal areas as shellfish water protected areas
- Climate Change (Scotland) Act 2008 – contributes towards greenhouse gas reduction targets

A list of the areas to which the above legislation pertains can be found at Annex 1.

Marine Renewable Energy Developments

3.7 For marine renewable developments (offshore wind, wave and tidal generation schemes), those under 1 MW total output will require a marine licence (from Marine Scotland) in addition to the works licence from Shetland Islands Council. Developments designed to produce more than 1 MW will require a works licence, a marine licence and Section 36 permission under The Electricity Act 1989 (Requirement for Consent for Offshore Generating Stations)(Scotland) Order 2002 through application to Scottish Ministers. Developers can use the Section 36
application to obtain deemed planning permission for any onshore infrastructure associated with the development. Alternatively the latter can be obtained direct from the Planning Authority but the developer must state their preferred option at the application stage.

4. General Considerations

4.1 The Council will take account of the views of all interested parties, including competent and relevant bodies and local communities, in its determination of works licence applications.

4.2 Works licence applications will be determined with due regard to relevant national and local polices and guidance in place at the time of the application.

4.3 It shall be a condition of all works licenses that developers must comply with all relevant statutory controls currently in force or which come into force during the period in which their works licence remains valid. A failure to comply with any relevant statutory control or a breach of any condition which is brought to the Council's attention will be investigated and may, if circumstances warrant it, result in the Council taking appropriate action.

4.4 Where development for which a works licence has been granted does not commence within 3 years of the effective date of grant, the works licence and all rights in connection with it will be forfeit. This period may be extended provided developers submit an application for extension prior to the expiry of the 3 year period in the original works licence.

4.5 In respect of all works licences approved pursuant to this policy, if the works are not used, or the operations connected cease, for a continuous period of 3 years on a site for which a works licence has been granted and where development had previously been undertaken, the relevant works licence would cease to have effect. In that case, the licensee will take appropriate steps in correspondence with the Council to seek either an extension of time for continued non-development or approval to re-commence development. The Council will not be unreasonable in dealing with either of these requests but where neither scenario happens, or there continues to be no development on site, the Council may initiate proceedings to confirm forfeiture of the works licence. In calculating the 3 year period, no account will be taken of any period where works did not commence or were removed to comply with notices or orders served under other legislation.

4.6 Appropriate lights, buoys or beacons that comply with the International Association of Lighthouse Authorities’ guidelines must mark any installations close to navigation channels, or which may otherwise be a danger to navigation. Such markings will be specified in the works licence following consultation between the Council’s Ports and Harbours Operations and the Northern Lighthouse Board and must be present at all times when equipment is on site.
4.7 Where, following a Habitats Regulations Appraisal, an Appropriate Assessment is deemed necessary and subsequently indicates that the development/works will have an adverse effect on the integrity of any Natura 2000 site, the Council will be minded to refuse the application as required by the 1994 Regulations. Additionally the Council will take account of Articles 12, 13 and 16 of the Habitats Directive in respect of European Protected Species when considering works licence applications.

4.8 All applications for new or extended works must be submitted with a mooring specification that is suitable for the proposed development where this is required to maintain the works in position.

4.9 Where a works licence requires supporting environmental information, which may be in the form of an Environmental Impact Assessment required under another regulatory regime, the period for determination of the works licence will only commence once all environmental information is received by the Council.

4.10 Works licences may only be transferred to a new licensee with the Council’s prior written consent. A written application to transfer the licence must be made to the Council who will not unreasonably withhold any such request. Failure to obtain the Council’s consent may result in the Council revoking the licence.
SHETLAND ISLANDS COUNCIL WORKS LICENCE POLICY

PART II: POLICIES

1. GENERAL POLICIES

These policies apply to all structures and developments requiring a works licence under the Act of 1974.

G1 In determining applications for works licences, the Council will take account of, inter alia, the following factors:

- The need to ensure that safe navigation is maintained.
- Potential effects, including cumulative, on the environment, natural heritage interests and the historic environment.
- The implications for fishing interests.
- Existing marine developments, including fish farms, in the locality.
- The implications for recreational and other interests.
- The availability of any necessary infrastructure and potential impact on existing infrastructure, where relevant
- The economic and/or social benefits of the development

G2 The Council may be minded to time limit a works licence where it considers the proposed works to be experimental or where the licence is required by the applicant to run a pilot project or under such circumstances as the Council considers appropriate.
Relevant designations

Special Areas of Conservation
East Mires and Lumbister;
Fair Isle;
Hascosay;
Keen of Hamar;
Mousa;
